The people element in successful ergonomics programs

Description: Successful ergonomics programs are throughout industry, yet the leading cause of days away from work remain. In this discussion we'll review program roadmaps, readily available tools for evaluating risk and ideas on how reduce risk using the hierarchy of controls in alignment with the plan do check act cycle. Additional steps will be included, such as a prioritization ranking system and ensuring the key players' agreement. Some key players may seem obvious, upper management, continuous improvement, quality teams, engineers, and supervisors. The most critical person is the employee doing the task. Using real world examples, we'll share how an ergonomics program can fall flat without employee involvement and give you some easy tools to guard against this failure on your ergonomics journey.
